NASA JPL
Summary of the Environmental Data Resources (EDR) Area Study Report

The Environmental Data Resources (EDR) Area Study Report dated April 17, 2003, has been reviewed and is summarized below. The EDR review has identified other potential sources of chlorinated compounds in the City of Pasadena groundwater pumping wells (e.g., Sunset, Garfield, etc), which are located almost 3 miles downgradient of JPL property.

EDR Summary

The study area of the EDR generally encompassed a radial area three to four miles to the east and south-east of the JPL Facility (see Figure 1). Federal, state, and local databases were searched. Table 1 summarizes the databases that were searched but did not contain sites within the study area. Table 2 summarizes the databases that were searched that did contain sites within the study area. A summary of the number of sites found within each of the databases searched is provided in Table 3.

Many of the sites identified in the EDR report treat, store, or dispose of hazardous material containing chlorinated compounds. These sites are required to register the use of these compounds with federal, state, or local agencies. Table 4 provides a summary of the sites that are registered users of hazardous waste material containing chlorinated compounds. The Los Angeles County Public Works and John Muir High School are the only two sites that are registered hazardous material users that have reported any types of releases.

A total of 39 sites were reported to have experienced a release of contaminated material. These sites, which are summarized in Table 5, may or may not have been regulated and include accidental releases, leaking underground storage tanks, service station overfills, and vehicle fires. The majority of the releases occurred in the late 1980s and early 1990s, while the most recent release was reported to be July 2002. Primary material released included gasoline, diesel fuel, hydraulic oil, and waste oil. Other materials released included sodium hydroxide, sodium hypochloride with chlorine, oil-based paint and thinner, chromic acid, muriatic acid, and untreated sewage. Chlorinated compounds, such as tetrachloroethene (PCE) and trichloroethene (TCE), are compounds commonly found in waste oil and lubricating and motor oils.

There are a total of 17 dry cleaners that have operated in the study area. These dry cleaners and their locations are summarized on Table 6. Although none of these dry cleaning facilities have reported a release, the compound PCE present in the groundwater is a common dry cleaning agent.

Sanborn Maps

Sanborn maps of the study area for the year 1968 were reviewed. Seven sites were identified as potential sites that would most likely have used chlorinated solvents (e.g., PCE and TCE) for degreasing or specific manufacturing practices. These sites are summarized in Table 7. In addition, the 1968 Sanborn Map notes that a reservoir near the Garfield Avenue Municipal Pump House No. 23 was removed. Information regarding this reservoir (e.g., was it lined, where did the source water come from, dates of service, etc.) is in the process of being obtained.

(1) EPA ID can become inactive for the following reasons:
   a. Facility turned over to new owner
   b. Business moves to new location
   c. Waste no longer generated above reportable quantity

(2) This date was incorrectly listed in the database as 1900. Cannot verify correct date.

Table 7. Sites Identified on Sanborn Maps Potentially Using VOC-related Compounds

Site	Address	Potential Waste (1)
Machine Shop	410 N. Fair Oaks Ave	Solvents, waste oils, lead
Machine Shop	389 N. Fair Oaks Ave	Solvents, waste oils, lead
Electronics Manufacturing	409 N. Fair Oaks Ave	Halogenated solvents, heavy metals
Electronic Instrument Manufacturing	45 Eureka	Halogenated solvents, heavy metals
Machine Shop	35 $\frac{1}{2}$ E. Villa	Halogenated solvents, waste oils, lead, other?
Instrument Manufacturing	170 E. Orange Grove Blvd	Halogentated solvents, heavy metals

(1) Potential wastes based on common knowledge of practices and procedures used in these types of businesses.

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

CERCLIS-NFRAP: As of February 1995. CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 03/19/2003 has revealed that there is 1 CERC-NFRAP site within the searched area.

Site	Address	Map ID	Page

RCRIS: The Resource Conservation and Recovery Act database includes selected information on sites that generate, store, treat, or dispose of hazardous waste as defined by the Act. The source of this database is the U.S. EPA.

A review of the RCRIS-SQG list, as provided by EDR, and dated 09/09/2002 has revealed that there are 52 RCRIS-SQG sites within the searched area.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there are 180 HAZNET sites within the searched area.

Agency Name:	LINCOLN AVENUE WATER CO.		
Agency Address:	0		
Agency Contact:	Not reported	Agency Phone:	0
Design Flow:	0 Million Gal/Day	Baseline Flow:	0 Million Gal/Day
Facility Type:	Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)		
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.		
Agency Type:	Private		
Waste Type:	Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type) - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.		
Threat to Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent		

SOUTH COULTER WATER TREATMENT (Continued) **1001832556**

no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
NPDES Number: CA0064068 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4
